

# WHAT'S YOUR COUGH TELLING YOU?

With more than **11,000** people diagnosed with lung cancer in Australia each year, it's important to know what your cough is telling you.

do you have?

- ▶ a new cough that has persisted for **3** weeks or more
- ▶ a changed cough
- ▶ coughing up blood
- ▶ a chest infection that won't go away?

these symptoms may be due to other conditions, however it's important to see your gp or healthcare worker to be sure.
